**desk five**

electronic visitor management system

## User friendly - Easy check in / check out

DeskFive was developed as an easy checkpoint tool.

The user-friendly interface allows performing all operations with simplicity and insight with very little training needed.

## Network and Database compliance

Have multiple computers at multiple reception desks running DeskFive with a shared database and/or a shared badge printer.

You can run DeskFive as a BackOffice option for maintaining data as the receptionist checks in new visitors.

## Data analysis and report

View or print customized reports, control your company's meeting resources, view a complete history of visitors entering and exiting the company building, inquire by report purpose for visit and which staff member they were meeting with.

The "Top Visitor" and "Top Staff" statistics offer a report of which visitor most frequently visits your company and which staff member receives the most visitors.

## Multi resources

With the assistance of Auto Typing you will drastically reduce entry mistakes and reduce wasted time.

DeskFive is compatible with Corex card scan. Scan visitor's business card and all visitor information are added to the visitor record automatically.

Use Automatic email notification to inform staff member of their visitor's arrival for the scheduled meeting.

Print personalized staff route maps automatically for your visitor to location of meeting.

Use Multi lobby and Multi company features to manage entries and exits in buildings that support more than one company with several lobbies.

Use Pre-booking features to manage and preview events, visitors, and resources with estimated time of arrival and for the event.

## Security check-in and check-out

Secure check-in with logins for separate access rights for each user:

Secure check-out with tracking of all entry points and validates your visitors face with photo acquisition.

## DeskFive Applications

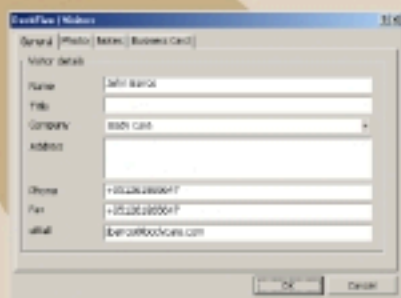

DeskFive provides the easiest and fastest way to check/in and check/out visitors at reception desk.

With Intelligent Type aid, automatic email notification, route map printing and Corex Card Scan you save time and reduce operations.

Define logins for different levels, controlling your user's access.

Define and customize your checkpoint options, actions such as automatic mail notification, print a route map to final destination, print or assign badge and create custom fields for your checkpoint tracking.

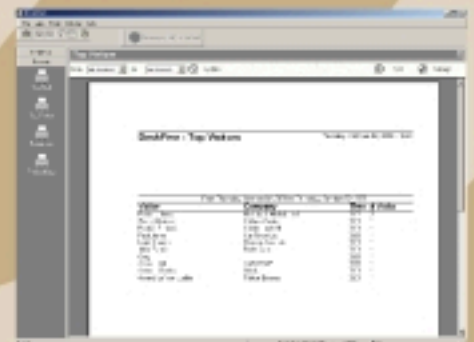

Edit your full visitor's details or use Corex Card Scan for instant database input. With Corex Card Scan your visitor business card is scanned and all information will automatically be included in the visitor record.

Assign future events, visitors and estimated time and resources.

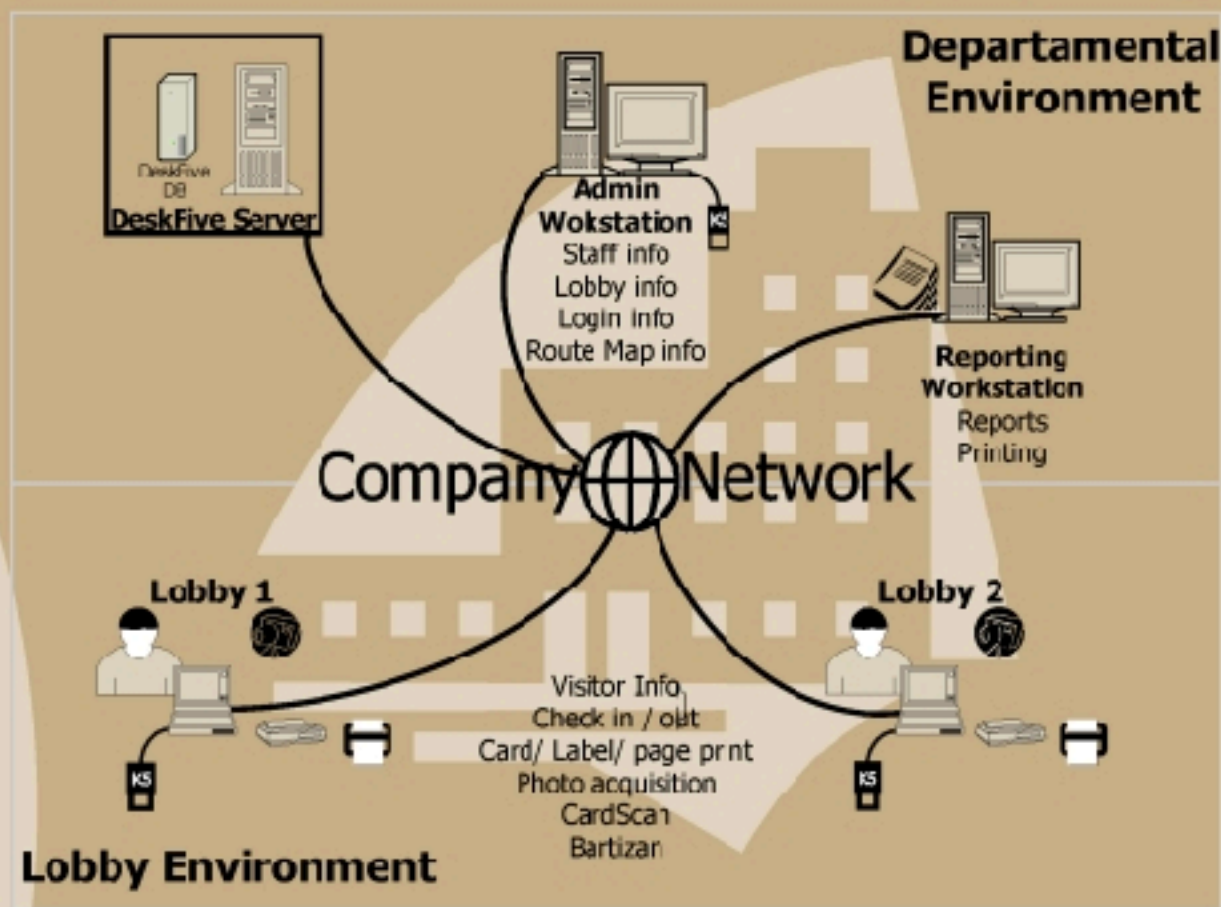

Pre-booking allows you to manage your company resources by providing a full report and also save time with multiple check INS.

View and print a list of visitors and staff presently in the building.

electronic visitor management system

## Card Scan

Corex Card Scan Integration enables Optical character recognition for instant database input.

Use it to scan data from business cards directly into the database.

## Face Snap - The optional Super Plug in

Face Snap Plug in is a software application that works with DeskFive

It automatically recognizes faces in a scenario, locates them and crops the face with 10% of the surrounding area, creating a perfect identification photo automatically.

You can also improve image quality, customizing your image settings, defining standard conditions. Face Snap is available in Demo mode in DeskFive, the full feature mode can be added through the RLL technology.
